Getafe University Hospital

POLITÉCNICA

Smart Service System

Software [Grafana](#)

IoT

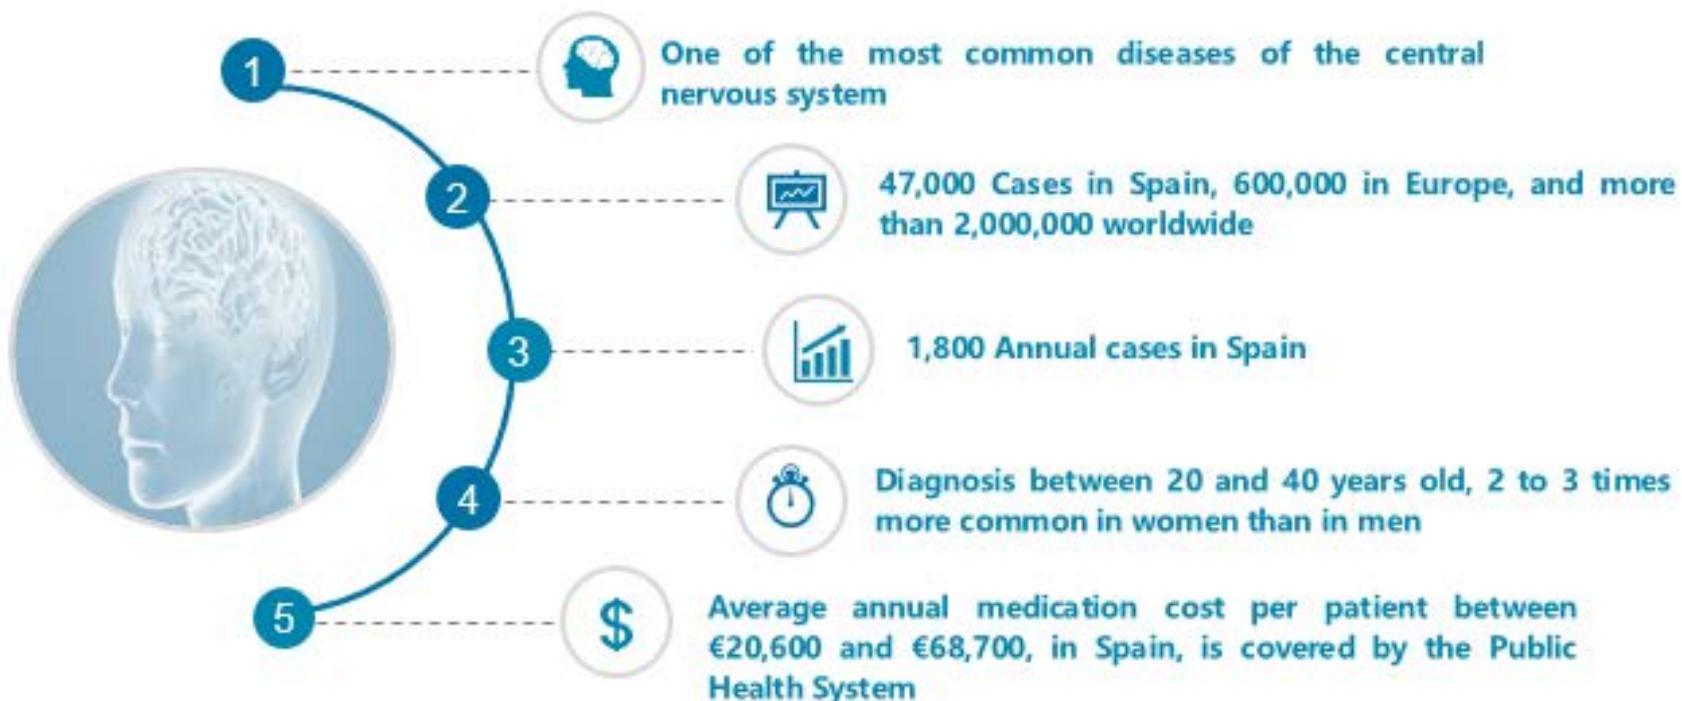

Gait monitoring sensor

Service approach

- Monitoring of the patient's routine for 48 hours
- Obtaining a report on the patient's gait
- Evaluation of changes or introduction of new measures
- Clinical decision making

Multiple sclerosis

Gait disorder of patients with Multiple Sclerosis

Some degree of mobility reduction

Subjectivity of tests

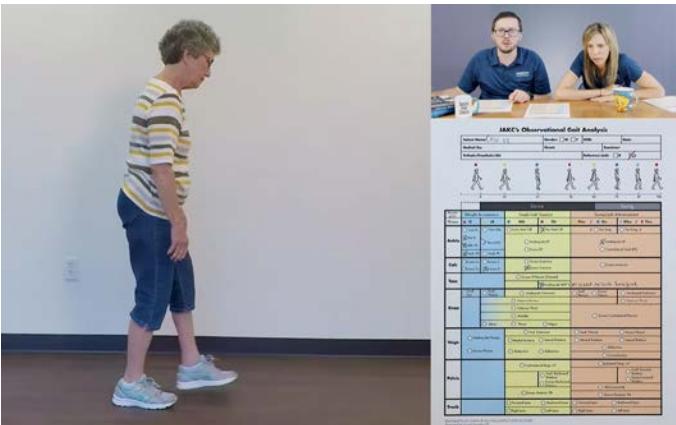

Gait impairment in more than two-thirds of patients

Impact on diagnosis

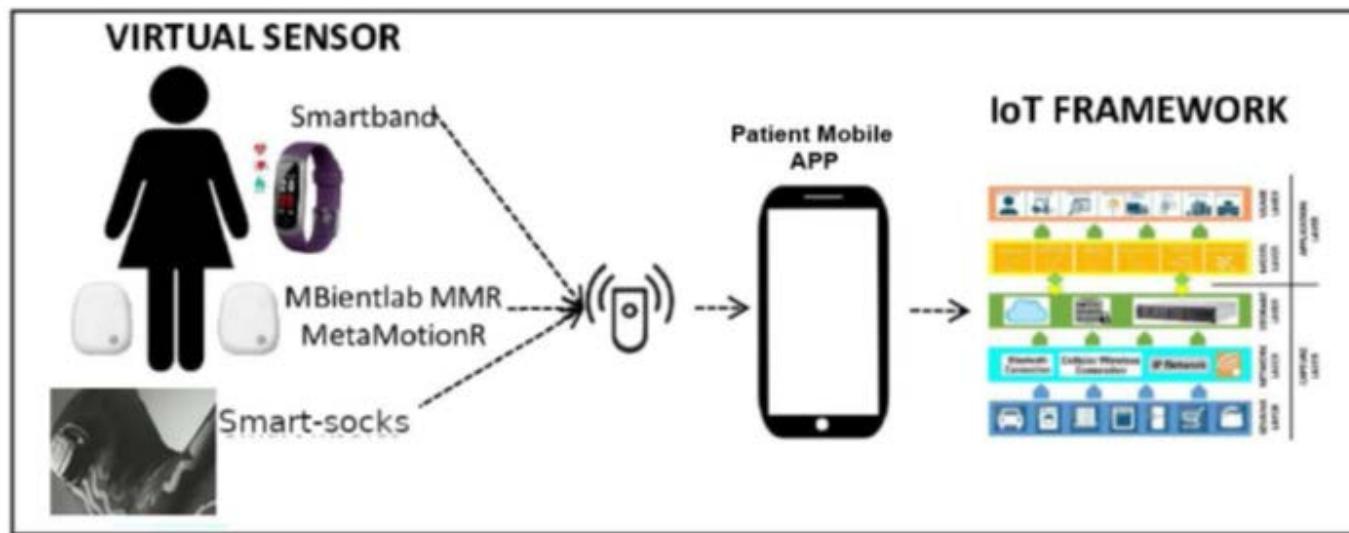

Digitalization opportunity: Gait disorder of patients with Multiple Sclerosis

Ehealth implications on MS IoT framework developed as a Smart Product-Service System

1º Starting from a real need

2º Create a new project or join one already in progress

3º Involve the students

4º Research: approach the concrete reality

Objectives, task, and coordination

5º Reflection in action during project execution

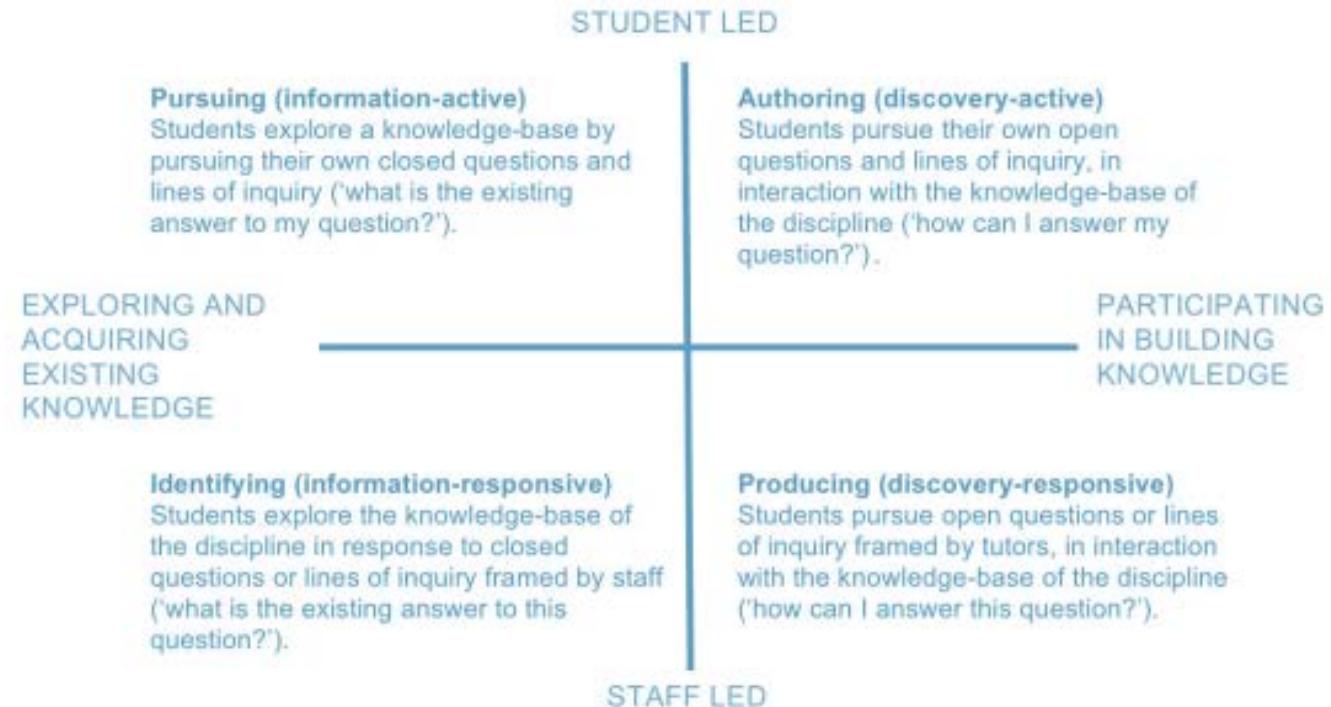

6º Multifocal evaluation: academic, service, and groups.

MS ecosystem

- 1º Starting from a real need
- 2º Create a new project or join one already in progress
- 3º Involve the students
- 4º Research: approach the concrete reality
Objectives, task, and coordination
- 5º Reflection in action during project execution
- 6º Multifocal evaluation: academic, service, and groups.

Inquiry-based learning: a conceptual framework

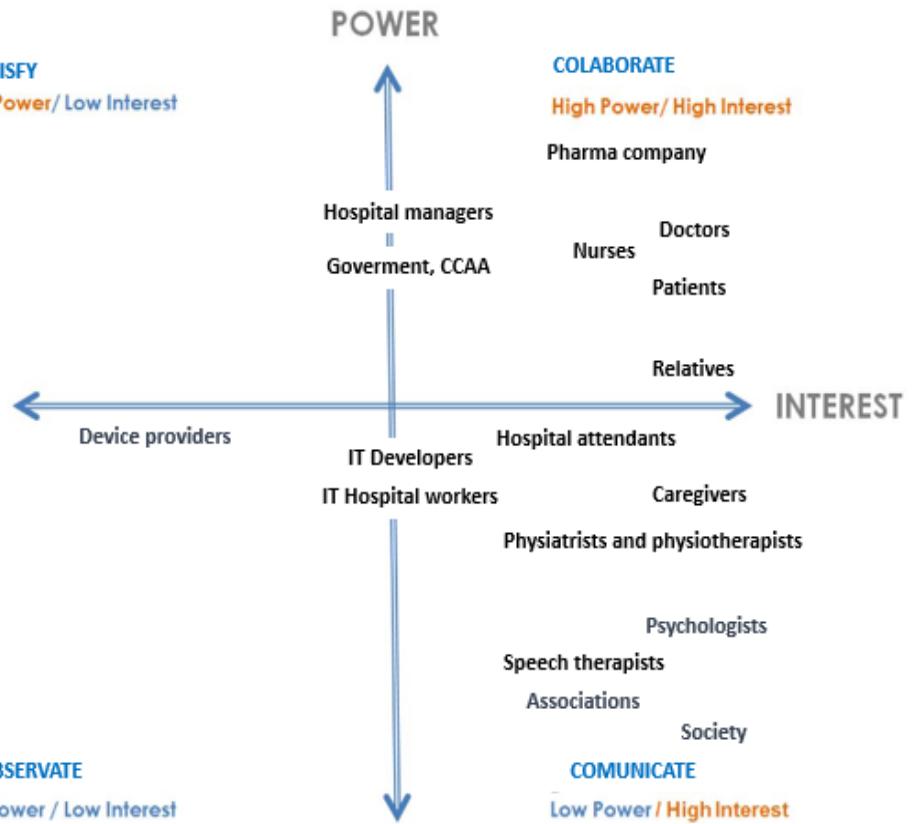

Source: Healey y Jenkins (2009)

Final thesis project

- 1º Starting from a real need
- 2º Create a new project or join one already in progress
- 3º Involve the students
- 4º Research: approach the concrete reality
Objectives, task, and coordination
- 5º Reflection in action during project execution
- 6º Multifocal evaluation: academic, service, and groups.

MS ecosystem

Research design

25 interviews
Different agents, ages, sexes, and locations

Analysis

3 blocks of questions

- Role and functions
- Quality of assistance
- Impact of digitalization on healthcare quality

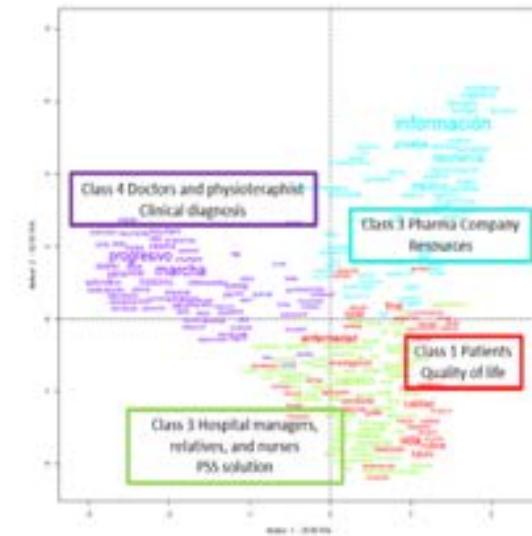

- 1º Starting from a real need
- 2º Create a new project or join one already in progress
- 3º Involve the students
- 4º Research: approach the concrete reality
Objectives, task, and coordination
- 5º Reflection in action during project execution
- 6º Multifocal evaluation: academic, service, and groups.

Health care PSS value creation analysis

Descending Hierarchical Classification (DHC)

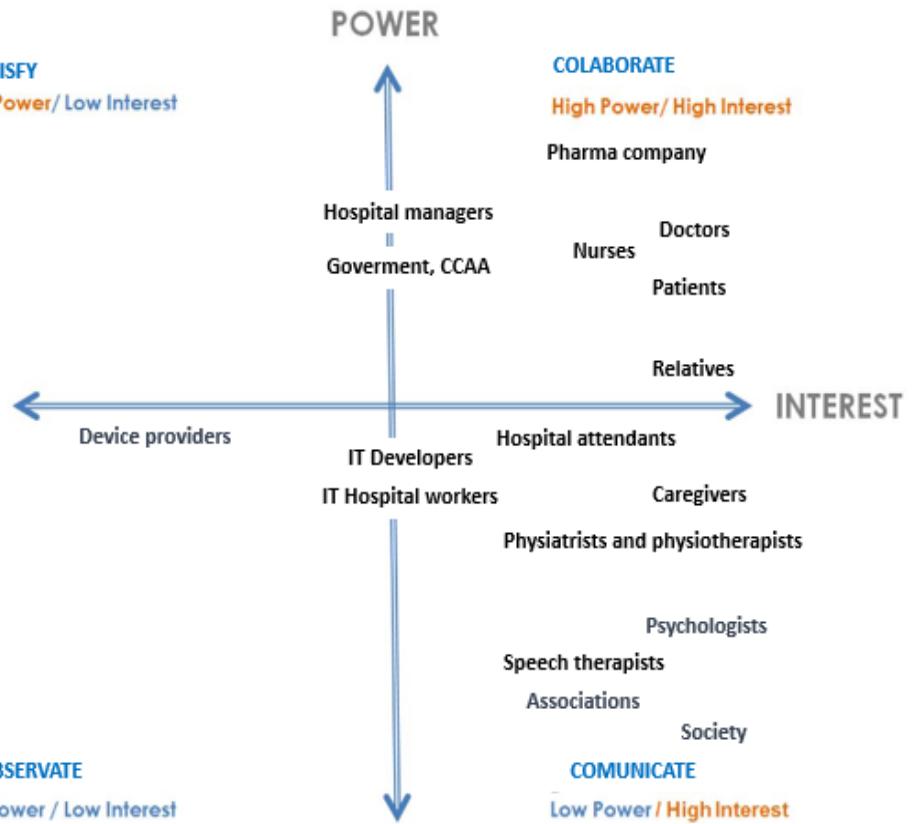

The Correspondence Factor Analysis (CFA),)

- 1º Starting from a real need
- 2º Create a new project or join one already in progress
- 3º Involve the students
- 4º Research: approach the concrete reality
Objectives, task, and coordination
- 5º Reflection in action during project execution
- 6º Multifocal evaluation: academic, service, and groups.

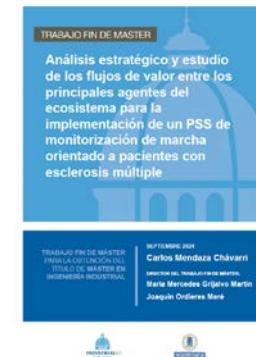

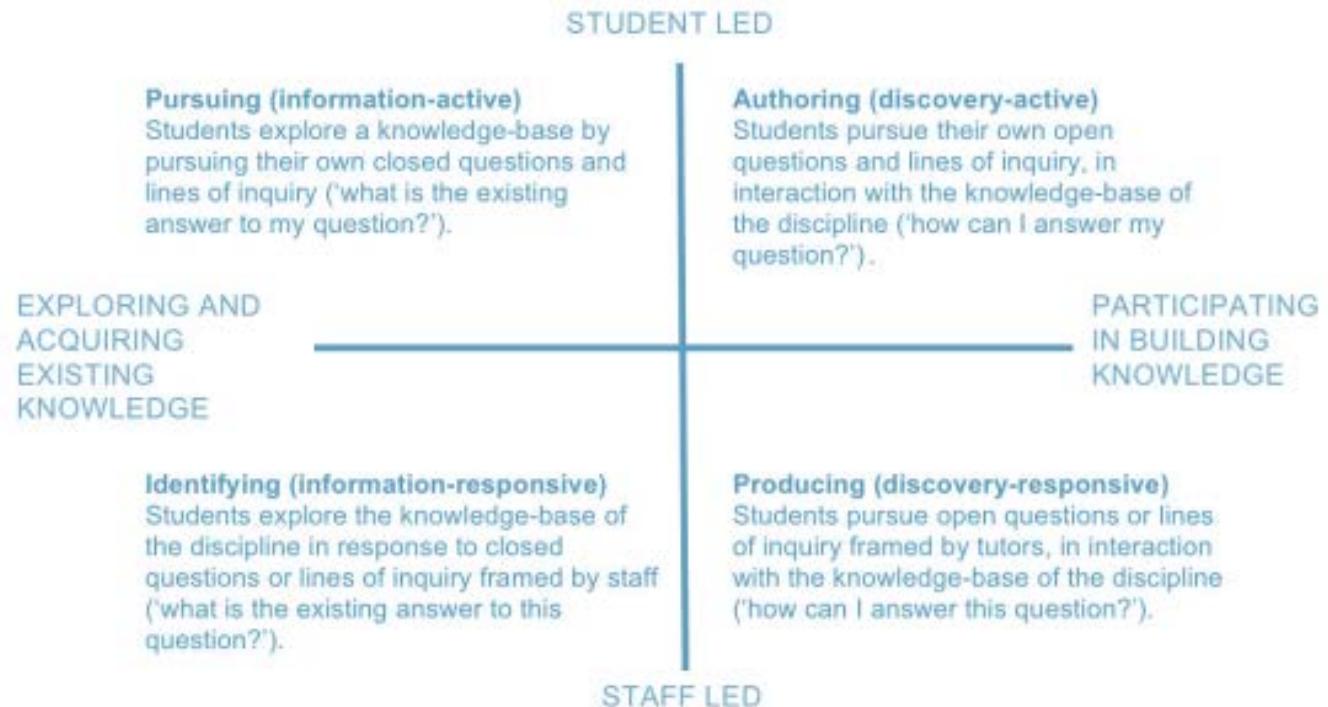

Final thesis projects

MS ecosystem

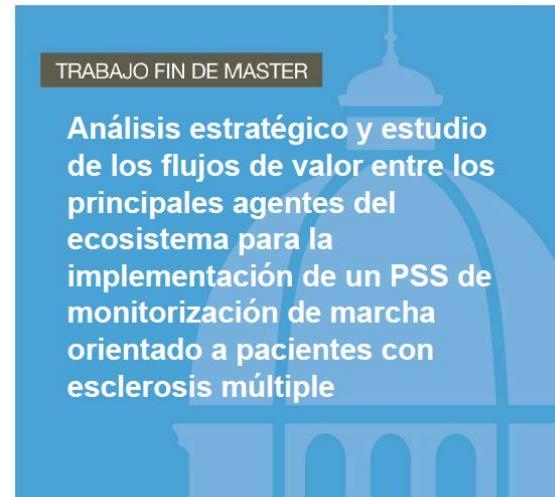

Inquiry-based learning: a conceptual framework

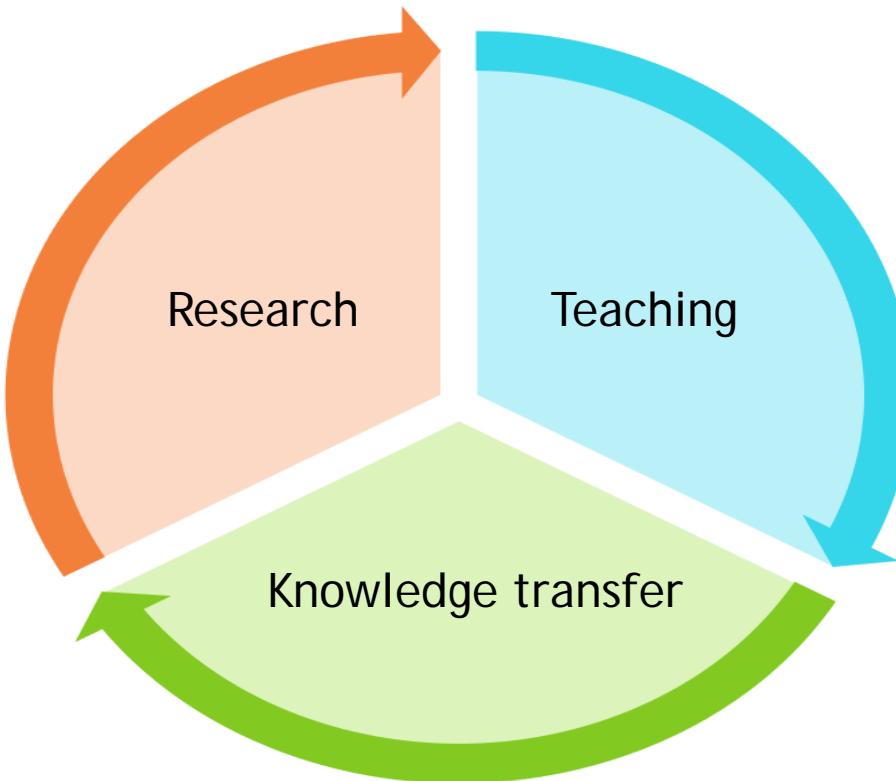

Source: Healey y Jenkins (2009)

- 1º Starting from a real need
- 2º Create a new project or join one already in progress
- 3º Involve the students
- 4º Research: approach the concrete reality
Objectives, task, and coordination
- 5º Reflection in action during project execution
- 6º Multifocal evaluation: academic, service, and groups.

Final thesis projects

2 medical and 2 innovation
conference presentations
1 Paper published

4 TFT
1 Case study in progress

2 collaborations with MS patient associations
1 Presentation at the 'Human-Centered Health Technologies' Technology Symposium

.... sometimes it is achieved
